

2-3 times more powerful fogging

MINI GAS FOGGER

Insect Zero
MS-5000
Made in Korea

NO	Part Name	NO	Part Name
1	Body Case Set (R,L)	8	Gas Inlet Set
2	Chemical Tank	9	Chemical Pipe Set with Cylinder
3	Coil Set (3-1: With Nozzle)	10	Pumping Rod
4	Burner Set	11	Pump Set (With Ball & Spring)
5	Safety Net	12	Gas Control Knob
6	Ignition Switch (With Wire)	13	Pumping Lever
7	Gas Pipe Set	14	Gas Connector

This fogging/screening(ULV) exterminator is designed to be used conveniently at any place and at any time to exterminate germs or harmful insects.,

Type	Gas Thermal Fogger
Fuel	Liquid Propane Gas
Fuel Consumptiona	Approx. 500 ml / hr
How To Start	Press The Ignition Button
Solution Output	1.5-1.8 liter / hr
Solution Tank	1.8 liter (Polyethylene)
Weight (Empty)	1.20 kgs
Dimension (LxWxH)	456 x 166 x 368 mm

A. SPECIFICATION

B. HOW TO USE

1. PREPARATION

- Please read this manual carefully
- Filling solution (diesel +chemicals) into chemical tank.
- Joining gas can into main body and be sure that is fully charged.

2. STARTING

- Opening gas control knob (valve).
- Pressing Ignition Switch.
- Being sure the coil fired and wait about 15 seconds for heating.

3. DISCHARGING FOG

- Pumping with pump-lever and control solution output.
- When the solution output is lower, Please pump again.
- Please often pumping continuously

4. STOPING

- After working, Closing gas control knob.
- Pumping with pumping lever in five or six times for eliminating remained chemicals in the coil and the ejection nozzle.

5. SPECIAL PREVENTION OF COIL CLOGGING

Detach main body of fogger from the tank after its use, and fill water in a plastic bottle/container, with ignition on.

Put cylinder in the water, and remove the residue (tar) in the coil by pumping fogger fast about 1 minute, until vapor is emitted (by doing this) almost all the residue (tar) will be removed.

6. MAINTENAMCE

- Chemical tank, gas, and main body should be kept separately.
- Cleaning the ejection nozzle with the pin after finishing works.

C. CAUTION

- This product is heated when used.

If any agent part is not completely burnt, it may cause flaming by wind.

So keep it away from inflammables. Keep away from children. Clean thoroughly after use.

- Nothing needs to be done after fogging method.

But separate pesticide box and main body, heat the pipe coil, put water with detergent in a small container, and pump it fast every 5-6 times' use of screening method. This will take away all the dirt sticking to the coil. This will keep the product in good condition. When you do not use it for a long time, separate pesticide box and main body and clean the pump with water using some detergent.

D. FOGGING EXTERMINATING

- Use the mixture of dispensing agent liquid and pesticide. Follow the manufacturer's instruction for mixing rate.
- Pros and cons It is making fog by heating the mixture of dispensing agent liquid and pesticide. The pesticide stays in the air for long and slowly comes down on the ground. It is eco-friendly.

E. SCREENING(ULV) EXTERMINATING

It is making fog by heating the mixture of diesel/regular oil and pesticide. The fog spreads evenly. This is most commonly used method and it covers a wide area in a short time. It is not eco-friendly.
