EXIFLUKE[®] 240

Oral Flukicide

For Cattle

ACTIVE CONSTITUENT: 240g/L TRICLABENDAZOLE

For the treatment of triclabendazole-susceptible early immature, immature and mature liver fluke (Fasciola hepatica) in beef and dairy cattle.

21340 04/20

SAFETY DIRECTIONS

Harmful if absorbed by skin contact or swallowed. Avoid contact with skin. Wash hands

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 13 11 26. For additional information consult the Safety Data Sheet

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND THE ENVIRONMENT

Dangerous to fish. DO NOT contaminate dams, rivers or streams with the drench or used container.

Triple rinse container and dispose of rinsate in compliance with relevant local, state or territory government regulations. If the container has the *drumMUSTER* logo visible, and has been thoroughly cleaned and dried, and is free of any visible residues, it can be recycled at any **drum**MUSTER collection or similar container management program site. The cap should not be replaced, but may be recycled separately with the container. If not recycling, break, crush or puncture container and deliver to an approved waste management facility. If an approved waste management facility is not available, bury the broken, crushed or punctured containers 500mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, vegetation and tree roots, in compliance with relevant local, state or territory government regulations. Do not burn empty containers or product.

STORAGE

Store below 30°C (room temperature) in original container, tightly closed, in a cool dry

LIMITATION OF LIABILITY

Failure to use the product strictly as directed may be illegal, prove dangerous or render the product ineffective. Notwithstanding anything else contained on this label, and subject to any rights you have under the Australian Consumer Law and any other applicable law, Bayer Australia Limited's liability is limited to replacing this product or supplying equivalent product or paying the cost of replacing this product, at its discretion.

DIRECTIONS FOR USE

PRECAUTIONS

In areas where Black Disease is known to occur, adequate vaccination procedures are

RE-TREATMENT INTERVAL

DO NOT re-treat animals for 56 days after last treatment.

GENERAL INSTRUCTIONS

EXIFLUKE® 240 Oral Flukicide for Cattle is a ready to use, free flowing aqueous suspension for the treatment and control of acute and chronic fascioliasis of cattle. EXIFLUKE® 240 contains triclabendazole, a member of the benzimidazole family of drenches. It is effective against triclabendazole sensitive strains of Fasciola hepatica (liver fluke). EXIFLUKE® 240 when used at the recommended rate of 12mg triclabendazole/kg bodyweight for cattle, i.e. 2.5 mL EXIFLUKE® 240 per 50kg bodyweight, is highly effective against susceptible early immature fluke, as well as immature and adult fluke.

Resistance may develop to any chemical. Ask your local veterinary practitioner or animal health adviser for recommended parasite management practices for your area to reduce development of resistance. It is advisable that a drench resistance test be conducted before any drench is used.

ORAL DOSE RATE

Cattle 2.5mL per 50kg liveweight.

CRITICAL COMMENTS

- 1. EXIFLUKE® 240 may be administered at the same time as animals are treated for lice.
- 2. EXIFLUKE® 240 may be administered to calves, pregnant beef cattle or weak or debilitated animals
- Wash out equipment with water after use.
- Cattle in excess of 650kg are to be dosed at the rate of 2.5mL per 50kg bodyweight.
- A representative sample of animals should be weighed before treatment either with
- Dose rate to be based on heaviest cattle in each group (bulls, cows, steers, calves, etc.).
- DO NOT underdose.
- Where there is a larger variation in size within the group, draft into two or more lines based on bodyweight, to avoid excessive overdosing
